Bookstore Inventory System

You are developing a bookstore inventory management system that keeps track of books, their quantities, and their prices.

Requirements:

1. **Input**:
   - Ask the user for the number of books in the inventory.
   - For each book, input the title, quantity available, and price per book.
2. **Processing**:
   - Calculate the total value of each book in the inventory.
   - Allow the user to search for a book by title and view its details (quantity and price).
   - Calculate the **total value of the entire inventory** (sum of all book values).
3. **Output**:
   - Display the list of books, their quantities, prices, and total value.
   - Allow the user to search for a book by title and display its details.
