Banking Application

Create a basic banking application where users can manage multiple accounts, make deposits, withdrawals, and check their balance.

Requirements:

1. **Input**:
   - Ask the user for the number of accounts they want to create.
   - For each account, input an account number and the initial balance.
2. **Processing**:
   - Allow the user to choose an operation: **deposit**, **withdraw**, or **check balance**.
   - After each operation, update the balance accordingly and ensure the balance never goes negative.
3. **Output**:
   - After each operation, display the account number and its updated balance.
